

Specifications LLS-0310/LL-0310

Microclime® Environmental Lid

Introduction

The MicroClime environmental lid is designed to fit SBS-conforming microplates, 127.76 mm x 86.48 mm. The lid dramatically reduces edge effects in microplates caused by evaporation of aqueous buffers or hydration of DMSO. Fill the lid either robotically or manually with the primary solvent. The fluid soaks into the polypropylene felt and creates a fluid vapor barrier between the microplate wells and the lid. The fluid does not come in contact with the microplate wells. Available in sterile (LLS-0310) and non-sterile (LL-0310) packaging. For research use only.

Features

- Compatible with a wide range of solvents
- 50 lids/case
- 10 lids/pack

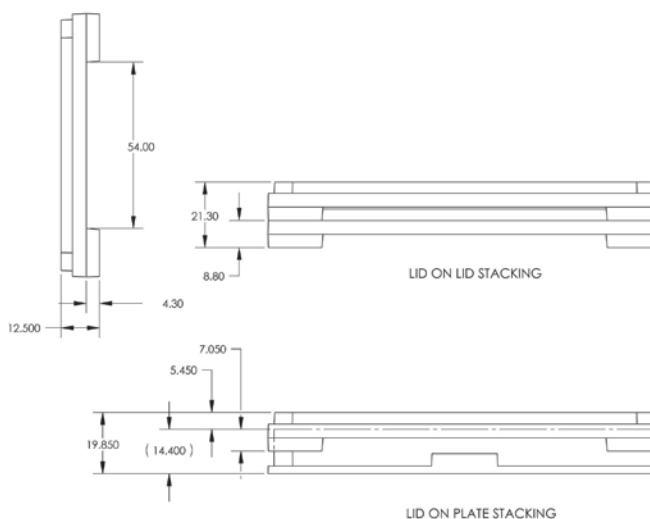

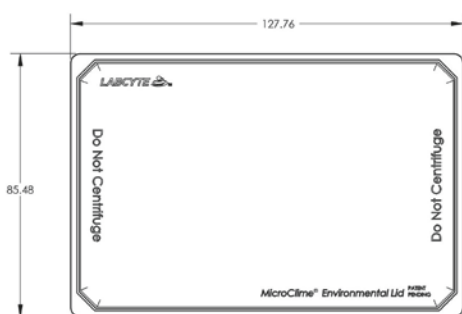

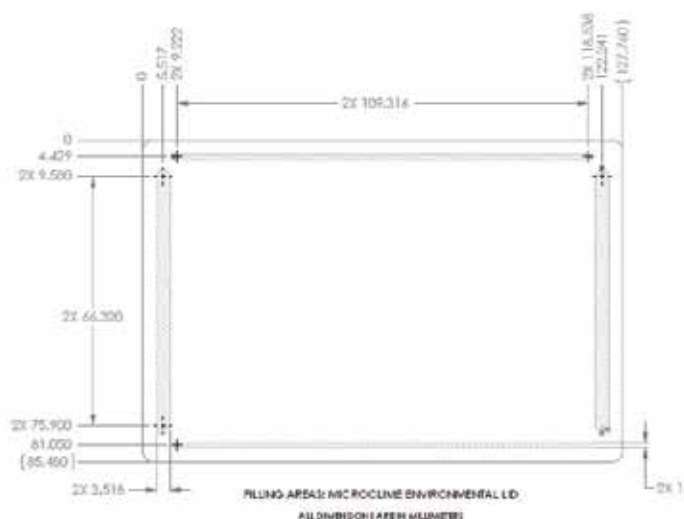

Specifications

Lid Composition: Cyclic Olefin Copolymer (COC)

Felt Composition: Polypropylene

Color: Clear

Fill Volume: Up to 9 mL
